EEE: Education, Economy, Empowerment

Social Watch computes a value for the gender gap in each of the three areas in a scale from 0 (when for example no women is educated at all and all men are) to 100 (perfect equality). The GEI, in turn, is the simple average of the three dimensions. In Education, GEI looks at the gender gap in enrolment at all levels and in literacy; economic participation computes the gaps in income and employment and empowerment measures the gaps in highly qualified jobs, parliament and senior executive positions.

Measuring the gap

The GEI measures the gap between women and men, not their well-being. Thus, a country in which young men and women have equal access to the university receives a value of 100 on this particular indicator. In the same fashion, a country in which boys and girls are equally barred from completing primary education would also be awarded a value of 100. This does not mean that the quality of education in both cases is the same. It just establishes that, in both cases girls are not less educated than boys.

Researchers

The GEI 2012 was computed by the research team of Action for Economic Reform and Social Watch – Philippines led by Rene Raya.

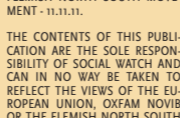

Methodology
