

Reproductive health

References

CURRENT SITUATION
(latest available data)

- Better situation
- Above average
- Below average
- Worse situation

RECENT EVOLUTION (Between most recent and previous available data)

- Significant progress
- Slight progress
- ↔ Stagnant
- Regression
- ← Major regression

Complete table at: www.socialwatch.org/statistics2009

Summary: CURRENT SITUATION (colour) RECENT EVOLUTION (arrow-icon)	COUNTRIES (Basic Capabilities Index value, 0-100)	WOMEN AGED 15-49 ATTENDED AT LEAST ONCE DURING PREGNANCY BY SKILLED HEALTH PERSONNEL (%)	BIRTHS ATTENDED BY SKILLED HEALTH PERSONNEL (%)	CONTRACEPTIVE USE AMONG CURRENTLY IN UNION WOMEN AGED 15-49 (%)	Value

NOTE:

1. Evolution: Evolution of indicators obtained by re-calculating those values resulting from the relative rate of variation among the following ranks:
Minor than -5: significant regression; Between -5 and +5: slight progress; Larger than 5: significant progress.
This rate is obtained from the following operation:
$$(2009 \text{ value} - 2008 \text{ value}) / 2008 \text{ value} * 100$$

2. Value reached by the index:

- The value results from adding the values calculated for each dimension and dividing the result by the total number of dimensions presenting data.

SOURCES:

- Women aged 15-49 attended at least once during pregnancy: Global Health Atlas, WHO (www.who.int/GlobalAtlas).
Births attended by skilled health personnel: Reproductive Health Indicators Database, Department of Reproductive Health and Research, WHO (www.who.int/reproductivehealth). Except for (+) Demographic and Health Surveys -STAT compiler (www.measuredhs.com/ahcassays).

NOTE:

1. Evolution: Evolution of indicators obtained by re-scaling those values resulting from the relative rate of variation among the following ranks:

Minor than -5: significant regression; Between -5 and -1:

Regression; Between -1 and 1: stagnant; Between 1 a 5:

slight progress; Larger than 5: significant progress.

This rate is obtained from the following operation: $(2009 \text{ value} - 2008 \text{ value}) / 2008 \text{ value} * 100$

2. Value reached by the index:

The value results from adding the values calculated for each dimension and dividing the result by the total number of dimensions presenting data.

NOTE:

1. Evolution: Evolution of indicators obtained by re-scalating those values resulting from the relative rate of variation among the following ranks:
Minor than -5: significant regression; Between -5 and -1: regression; Between -1 and 1: stagnant; Between 1 and a slight progress; Larger than 5: significant progress.

This rate is obtained from the following operation:
 $(2009 \text{ value} - 2008 \text{ value}) / 2008 \text{ value} * 100$

2. Value reached by the index: The value results from adding the values calculated for each dimension and dividing the result by the total number of dimensions presenting data.
3. Stagnant Evolution: In those indicators showing stagnant evolution in all their values, said evolution responds to lack of updating, being reproduced those values registered in 2008.

NOTE:

1. **Evolution:** Evolution of indicators obtained by re-scaling those values resulting from the relative rate of variation among the following ranks:
 Minor than -3: significant regression; Between -5 and -1: slight regression; Between -1 and 1: stagnation; Between 1 a 5: slight progress; Larger than 5: significant progress.
 This rate is obtained from the following operation:
 $(2009 \text{ value} - 2008 \text{ value}) / 2008 \text{ value} * 100$

2. Value reached by the index:

The value results from adding the values calculated for each dimension and dividing the result by the total number of dimensions presenting data.

3. **Stagnant Evolution:** In those indicators showing stagnant evolution in all their values, said evolution responds to lack of updating, being reproduced those values registered in 2008.

SOURCES:

Women aged 15-49 attended at least once during pregnancy: Global Health Atlas, WHO (www.who.int/GlobalAtlas).
 Births attended by skilled health personnel: Reproductive Health Indicators Database, Department of Reproductive Health and Research, WHO (www.who.int/reproductivehealth/).  Contraceptive use among currently in union women aged 15-49: World Bank (www.worldbank.org).

DEFINITION OF INDICATORS:

Women aged 15-49 attended at least once during pregnancy by skilled health personnel (%): Percentage of women aged 15-49 years attended at least once during pregnancy by skilled health personnel (doctors, nurses or midwives).

Births attended by skilled health personnel (%): Percentage of births attended by skilled health personnel (doctors, nurses or midwives).

Contraceptive use among women currently in union aged 15-49 (%): Percentage of women in union aged 15-49 years currently using contraception.

Methodological notes and guidelines at the end of the section.
